Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) ~~Pluggable~~ A pluggable server module ~~(10)~~, for remote controlling of a device ~~(11)~~, comprising a wireless transceiver ~~(1)~~, a computing means ~~(3)~~, <u>a storage means,</u> a server remote control logic ~~(4)~~, a standardized interface and a connector ~~(5)~~ for connecting to said device ~~(11)~~, wherein said wireless transceiver ~~(1)~~ is connected to said computing means ~~(3)~~, said computing means ~~(3)~~ is connected to said server remote control logic ~~(4)~~, ~~and~~ said server remote control logic ~~(4)~~ is connected to said standardized interface and said connector ~~(5)~~<u>, and said storage means is connected to said computing means for storing user interface data</u>.

2. (Currently Amended)   ~~Pluggable~~ A pluggable server module according to claim 1, further comprising a wireless protocol stack server ~~(2)~~ connected between said wireless transceiver ~~(1)~~ and said computing means ~~(3)~~.

Claims 3-5 (Canceled).

6. (Currently Amended)   ~~Method~~ A method for remote controlling of a device ~~(11)~~ by a wireless remote control terminal ~~(12)~~ via a wireless link, a pluggable server ~~(10)~~ connected to said device via a standardized interface and a connector ~~(5)~~, comprising the steps of:

　　　　　<u>transferring user interface content and/or auxiliary content interface by a wireless protocol stack from said pluggable server to said wireless remote control terminal, that may contain among others a set of commands for controlling said device or said pluggable server via said wireless link;</u>

　　　　　<u>displaying said contents on a display in said wireless remote control terminal;</u>

　　　　　<u>selecting one of the commands in said terminal, by a user input; and</u>

<u>generating a contents request in said terminal according to said</u> <u>selection.</u>

[[-]] ~~ransferring~~ transferring a content request by wireless protocol stack via said wireless link from said wireless remote control terminal ~~(12)~~ to said pluggable server ~~(10)~~;

[[-]] ~~invoking~~ invoking the desired remote command in device ~~(11)~~ by using a communication protocol on the standardized interface and connector ~~(5)~~, the remote command being triggered, specified and parameterized by said content request to the pluggable server;

[[-]] ~~executing~~executing said command in said device ~~(11)~~;

[[-]] ~~communicating~~communicating the result of the remote command execution in said device ~~(11)~~ from said device ~~(11)~~ to said pluggable server ~~(10)~~;

[[-]] ~~creating~~creating a corresponding response page in said pluggable server ~~(10)~~; and

[[-]] ~~transmitting~~transmitting and displaying said corresponding response page on the remote control terminal ~~(12)~~.

Claims 7-8 (Canceled).

9. (Currently Amended)   ~~Method~~ A method for transferring <u>device specific</u> user interface data for preparing the remote controlling of a device by means of a pluggable server module, from said device to said pluggable server module, comprising the steps of:

detecting a pluggable server module connected to a standardized interface and a connector of said device;

retrieving ~~said~~ the user interface data from a storage means of said device; and

transferring ~~said~~ the user interface data to said pluggable server module via said standardized interface and said connector.

10. (Currently Amended)   ~~Method~~ A method for retrieving user interface data for preparing the ~~remote~~controlling of a device by means of a pluggable server ~~module, comprising~~ module to enable interaction of the device, wirelessly, with a remote terminal, said method comprising the steps of:

4

requesting device identifying information from said device, containing at least device and manufacturer related information;

receiving and storing said device identifying information in said pluggable server module including updating stored identifying information of said device in said pluggable server module;

transferring said device identifying information to a network access point which may be the remote control terminal (12) itself,

transferring said device identifying information from said ~~Network Access Point~~ network access point to a communication network;

receiving said user interface data by response from said communication network; and

storing said user interface data in said pluggable server module.

11. (Currently Amended)   ~~Method~~ A method according to claim 10, wherein the transfer of said device identifying information from said remote control terminal to said communication network is executed by:

[[-]]   transferring said device identifying information first to an internet access point via a telephone network, and then

[[-]]   transferring said device identifying information from said internet access point to said communication network via the Internet.

12. (Currently Amended)   ~~Computer~~ A computer program, embodied on a tangible medium, for remote controlling of a device (11) by a wireless remote control terminal (12) via a low power radio ~~link, a pluggable~~ link and a pluggable server (10), comprising a program code ~~means~~ for carrying out the steps of anyone of claims ~~6 to 11~~ 6 and 9-11, when said program is run on ~~an installation bus gateway (10) or a user interface device (20)~~ the pluggable server.

13. (Currently Amended)   ~~Computer~~ A computer program product, embodied on a tangible medium, comprising means for providing a program code ~~means~~ stored on a computer readable medium for carrying out the method of anyone of claims ~~6 to 11~~ 6 and 9-11, when said program product is run on ~~an~~

5

~~installation bus gateway (20) or a user interface device (20)~~ <u>a pluggable server</u>.

14. (New)   A device comprising a logic element and a control logic, and being characterized by a standardized interface and connector for operably connecting to a pluggable server according to claim 1, wherein said standardized interface and connector are connected to said control logic, and said control logic is connected to said logic element.

15. (New)   A device comprising a logic element and a control logic, and being characterized by a standardized interface and connector for operably connecting to a pluggable server according to claim 2, wherein said standardized interface and connector are connected to said control logic, and said control logic is connected to said logic element.
